

iscsi

The iscsi object is used to manage iSCSI operations on the storage server.

Usage

```
show iscsi [targets|sessions|connections|initiators|hosts]
create iscsi nodename=<iscsiname> [immediateData=1|0] [user=<user> password=<pass>] [portalGroup=<tpgt>[,]..
create iscsi portalgroup=<tpgt> portal=<ipaddr>[ ...]]
set iscsi nodename=<iscsiname> [user=<user> password=<pass>] [portalGroup=<tpgt>[,]..
delete iscsi nodename=<iscsiname>
delete iscsi portalgroup=<tpgt>
```

Examples

```
mayaccli create iscsi portalgroup=1 portal="\10.1.1.91 10.1.1.95\"
mayaccli create iscsi portalgroup=2 portal="\192.168.1.1 192.168.1.5\"
mayaccli create iscsi nodename=iqn.2010-03.com.zettalane:storage.nodel user=testuser pass=testpass
portalgroup=1,2
```

Output
