

vg

Create and manage volume groups.

Usage

```
create vg      [label=]<vgname> [description=<text>] force=[1|0] (disk=<device-name>) ... [options=<vgcreate-opts>]
bind vg       [volume=] <vgname> (disk=<device-name>) ... [options=<vgextend-opts>]
unbind vg     [volume=] <vgname> (disk=<device-name>) ... [options=<vgreduce-opts>]
set vg        [volume=]<vgname> [online=yes|no] [writeprotect=yes|no]
show vg       [<vgname>]
```

Examples

```
mayaccli create vg vgtest disk=dev/sda disk=/dev/sdb disk=/dev/sdc
```

Output

```
mayaccli show vg
Configured volume groups :
Name                Status                Size      Disks
-----
rhel                 r/w,active,resizable  9.00G    sda2
testvg1              r/w,active,resizable  223.57G  sdb
```
