

Unable to write to Crossmeta directory

Problem

After unclean shutdown the Crossmeta root file system becomes readonly unable to write to Crossmeta drive.

Solution

When the root file system was not properly unmounted earlier, the Crossmeta driver will mount the root file system readonly as file system check is required to remount in read-write mode.

To remount the root file system in read-write mode:

1. If needed start the Crossmeta drivers
c:\program files\crossmeta\service_crossmeta start
2. Perform root file system check which will remount in read-write mode
c:\program files\crossmeta\service_crossmeta check
